Installation guide:

1. Go to educ.jmu.edu/~phill2mj/ to find information and the latest version
2. Download the .zip for your operating system and unpack it.
3. Macintosh:
   a. Drag BioSearch.app into your Applications folder to install (optional)
   b. Double click on Biosearch.app to run the program
4. Windows/Linux:
   a. Place the BioSearch folder in your Program Files (Windows), or another convenient location
   b. Double click on BioSearch.jar to run the program

To use the search engine, input your search terms into the search box. Use the tabs at the top to search using either the exact terms, derivatives of the terms, or partials of the terms.

Use the check boxes to select whether or not you want the search engine to recursively search through the text using replacement terms from our engineering-to-biology thesaurus, or whether you want to display the results minimally, or in context.

The results will appear in the main box, and can be saved or cleared using the buttons to the right.
